SURFACING SYSTEMS

Looking for sports or play surfacing for your school, nursery or playground... but not sure which one to choose?

We know choosing the right sports or play surfacing can be a real challenge, so Bradleys Surfacing Systems is here to help!

Sports, such as football, tennis and cricket require extremely accurate surfaces for a high level of play and surfacing needs to be durable and functional, whilst offering a comfortable playing experience. For play areas, surfacing should be soft and durable, whilst being easy to maintain, with a focus on safety and critical fall requirements.

But, with so many products on the market with different applications, it can be difficult to know which type of surface is right for your educational facility.

As part of the service provided by Bradleys Surfacing Systems, we've searched the market for the best products in terms of quality and assurance and compiled a brief review to help you make an informed decision.

SPORTS PRODUCTS

GrandPlay, Playrite

This 12mm texturised monofilament is categorised as an ITF 4 medium fast surface. It's a great tennis surface for educational facilities that are looking to use the surface for multi-sport applications too. With up to a 10-year guarantee, Grandplay is a great alternative to other similar products on the market.

Domo® Hockey Extreme MDC Ultra, Domo® Sports Grass

This is a fantastic hockey surface, but it's also considered one of the best multi-use products on the market at the moment. The surface is suitable for hockey, tennis, netball, football and general sports use. Its polymer blended Polyethylene fibre makes it extremely durable, as well as soft to touch, and a good investment for educational settings.

SPORTS PRODUCTS

Domo® Naturafill, Domo® Sports Grass

If you're looking for an alternative infill for 3G pitches rather than SBR rubber crumb (recycled tyres), then this may be the answer. This cork infill is 100% natural, fully recyclable, odourless and still performs very well, tested to FIFA Quality and FIFA Quality Pro, as well as IRB 22. It also creates a cooler surface – 30% cooler than traditional in-filled pitches.

Ecocept, TigerTurf

TenCate Ecocept™ is a seamlessly paved base layer, made with recycled waste plastics and waste rubber to provide high performance attributes for sports applications. Ecocept offers a more sustainable alternative to traditional pitch construction techniques as it makes use of recycled materials and can also be made using end-of-life synthetic turf. Not only does Ecocept provide a structurally stable base with sports performance qualities, but it also has excellent water management properties, allowing for improved drainage.

LANDSCAPING PRODUCTS

Point elastic sports floors, PVP

PVP's range of point elastic sports floors offer an indoor surface ideal for school multi-use. The highest quality rolls consist of rubber matting, combined with a Polyurethane top coat. A flexible system, the depth of base layer determines the amount of cushioning and the PU coating gives a seamless top surface. Point elastic sports floors are suitable for basketball, badminton, netball, football and tennis. Available in a range of colours.

Meadow, Turfworks

If you're looking for the ultimate in a natural looking synthetic turf for landscaping, then Meadow is an excellent option. It combines four tones of green (most products have two) with beige to create a very realistic product. It's relatively long at 50mm height, making it soft and great to play on – this is ideal for an early years/nursery setting.
